### EXPERIENCE

#### Actify inc

Software Developer-Intern

July-2025 - August-2025

- Worked as a Front-End & App Developer, responsible for planning, building, and publishing mobile applications and websites, using React.js, React Native, TypeScript, JavaScript, and API integration
- **Actify Business CRM** : Enhanced Actify Business CRM mobile application for sales professionals with features including contact management, lead tracking, direct communication (calls, emails, WhatsApp), lead conversion, reminders, and performance visualization; implemented seamless synchronization with the Actify CRM Web App [View Work](#)
- **Actify HRMS** : improved a role-based HRMS app with attendance tracking, leave management, and daily work data for employees. Improved admin workflows with leave approval/rejection controls and expanded real-time API integration, delivering a scalable, secure, and user-friendly mobile solution. [View Work](#)

### PROJECTS

#### Employee Management System : [Live Preview](#)

- Tools - React.js, redux Toolkit, ShadCn ui library, json-server.
- An EMS website created to streamline HR operations with role-based authentication. Employees can mark attendance, apply for leaves, and view their active data.
- admins can add new accounts, update employee positions, and manage employees as per department.
- The Website uses real-time API integration for accurate data management and delivers a clean, user-friendly interface for both employees and administrators.

#### Fitness App : [Download Mobile APK](#)

- Tools - React native ,Expo json-server .  
A fitness app with a dashboard by body parts, detailed exercise screens with GIFs and steps.
- a workout list to track added exercises, and a search bar to
- quickly find workouts.

#### Weather App : [Live Preview](#)

- Tools - React.js, weather APIs.
- An interactive App where users can select a country, enter their city, and instantly view live weather updates.
- Features include a dark/light theme toggle and real-time API integration for accurate weather data.

#### Task & Note App : [Live Preview](#)

- Tools-React.Js
- A productivity app planned to let users add tasks with categories, view them in an easy-to-navigate list, and quickly find what they need.
- Features include view, edit, and delete options, with all data stored securely in localStorage for persistence.
